- Split level loading racks
- Custom fabricated loading racks

Standard dimensions:

Height: 9' - 9" to 15'

Length: 6' - 3" to 16'

Loading Racks

Hemco loading racks are designed to withstand heavy loads and provide safe and efficient access in any situation that your operations require. They are prefabricated from hot rolled structural steel sections which provide for a strong, sturdy rack. Sections are shop welded to minimize bolting connections in the field and reduce erection costs. Non-skid, open grating and stair treads provide safe footing while working on any rack.
